Abstract

As we move further into a knowledge economy, many processes can be labelled as “emergent knowledge processes” (Markus *et al.* 2002; Majchrzak 2006). These processes involve building knowledge in an unstructured and dynamic manner through diverse human participation. Unfortunately, such processes are generally not well supported by existing IT systems, such as executive information systems, expert systems or electronic communication systems (Davenport 2005; McAfee 2006; Wagner 2006). To address the unique requirements of IT systems supporting emergent knowledge processes, this study proposes and evaluates the use of wiki technology and the “wiki way” of collaboration (Leuf and Cunningham 2001; Reinhart 2005). As such, it combines a design theoretic approach (Markus *et al.* 2002) with an empirical evaluation. This research addresses the collaboration in wikis through a new lens by viewing a wiki and its participants as an emergent complex system. Previous work, in contrast, has primarily focused on understanding contributors’ activities from a psychological or internal community perspective.

This dissertation draws on the literature of stigmergic collaboration (Grassé 1959; Parunak 2005) which establishes that individuals can collaborate without direct communication if the work product itself represents or contains coordination stimuli. Based on stigmergic theory, the research demonstrates the wiki way as a promising alternative to achieve more effective emergent knowledge processes through the application and acceleration of the mechanism of stigmergy. Stigmergy distinctively relies on the iterative interaction of agent and environment through ongoing and mutual modification or stimulation (Marsh and

Onof 2008). The agents modify the environment through physical manipulation or encode signs directly into or upon it. In turn, the environment plays the role of medium which acts as a cue triggering further actions from agents (Elliott 2007). In such a system, wiki technology and the “wiki way” promise increased efficiency and effectiveness to motivate participants to contribute content collectively. Furthermore, the diversified contributions can be easily integrated into the environment (wiki), thus attracting additional participation. Moreover, on a level above the local interactions of participants and environment, wiki and its participants together can be considered as a stigmergic system. Such a system is often described as “self-organizing” and exhibiting “emergent behaviour” (Parunak 2005; Kelly 1995). In particular, the emergent dynamic is a distinguishing factor of stigmergy. The emergent capacity of stigmergy means that such systems are evolvable, adaptable to the dynamics and able to develop new behaviour.

This dissertation tests the feasibility and effectiveness of the proposed approach through an in-depth investigation of the phenomenon in the context of Wikipedia, one of the most popular and successful wiki applications (Tapscott & Williams 2006). Drawing on the framework of stigmergy, the study systematically identifies significant factors in Wikipedia that harness the principles of stigmergic collaboration based on empirical analysis of longitudinal data from a sample of Wikipedia articles. The “emergent behaviour” in Wikipedia is further evaluated and modelled on the system level based on the data of Wikipedia statistic websites. The statistical results strongly support the research model and expectations. The findings entail significant implications for both research and practice. In terms of research, it provides a better understanding for the underlying mechanism of the wiki way of collaboration by bringing in a stigmergic perspective. It

also identifies critical features in wikis to enable and accelerate stigmergic collaboration. For practice, it offers design guidelines for building up effective wiki collaboration to support emergent knowledge processes.

Table of Contents

CHAPTER 1	1
INTRODUCTION	1
1.1 Research Background.....	1
<i>1.1.1 Emergent Knowledge Processes</i>	<i>3</i>
<i>1.1.2 Learning from Commons-based Peer Production.....</i>	<i>6</i>
1.2 Research Questions.....	13
<i>1.2.1 Collaboration Paradox.....</i>	<i>15</i>
<i>1.2.2 Sustainability</i>	<i>17</i>
1.3 Dissertation Structure.....	19
 CHAPTER 2	 21
STIGMERGIC COLLABORATION.....	21
2.1 Concept of Stigmergy.....	21
2.2 Components of Stigmergy.....	23
<i>2.2.1 Resource-constrained Agents</i>	<i>24</i>
<i>2.2.2 Global Context of Environment</i>	<i>25</i>
2.3 Agent-Environment Interactions.....	27
<i>2.3.1 Stigmergic Interaction Processes.....</i>	<i>27</i>
<i>2.3.2 Classes of Stigmergic Interactions</i>	<i>29</i>
2.4 Emergent Intelligence.....	31
 CHAPTER 3	 33
THEORETICAL DEVELOPMENT	33
3.1 Principles of Stigmergy Applied in Wikipedia	36
<i>3.1.1 Contribution Activities</i>	<i>36</i>
<i>3.1.2 Marker-based Cue to Contribution Activities</i>	<i>37</i>
<i>3.1.3 Sematectonic Cue to Contribution Activities</i>	<i>44</i>
<i>3.1.4 Moderating Effects.....</i>	<i>45</i>
<i>3.1.5 Mediating Effects</i>	<i>47</i>
3.2 Sustainability–Emergent Capacity at System Level	50
<i>3.2.1 Growth of Knowledge Asset.....</i>	<i>52</i>
<i>3.2.2 Overall Quality Improvement.....</i>	<i>52</i>

CHAPTER 4	54
RESEARCH METHOD.....	54
4.1 Data Source.....	54
4.2 Measurement	56
<i>4.2.1. Stigmergic Collaboration in Wikipedia</i>	<i>56</i>
<i>4.2.2. Wiki Site Sustainability</i>	<i>62</i>
CHAPTER 5	64
ANALYSES AND RESULTS.....	64
5.1 Stigmergic Collaboration in Wikipedia.....	64
<i>5.1.1 Descriptive Statistics and Correlations of Key Variables</i>	<i>65</i>
<i>5.1.2 Data Analyses</i>	<i>69</i>
5.2 Sustainability	86
<i>5.2.1 Growth in Knowledge Asset.....</i>	<i>86</i>
<i>5.2.1 Improvement in Quality</i>	<i>89</i>
CHAPTER 6	92
DISCUSSION AND IMPLICATIONS.....	92
6.1 Discussion of Findings	92
<i>6.1.1 Stigmergic Collaboration in Wikipedia</i>	<i>94</i>
<i>6.1.2 Sustainability</i>	<i>99</i>
6.2 Implications.....	99
<i>6.2.1 Implications for Theory</i>	<i>99</i>
<i>6.2.2 Implications for Practice.....</i>	<i>101</i>
6.3 Limitations and Future Study	102
CHAPTER 7	104
CONCLUSION	104
APPENDIX A: Wikiproject Based Quality Assessment Criteria	105
