## Abstract

This dissertation reports the results of the first comprehensive study of software piracy in Hong Kong utilizing the grounded theory approach. Qualitative data were used to generate hypotheses, which were then tested using survey methodology. The results have important implications for controlling a multi-million dollar problem in “Asia’s World City”.

The costs of software piracy are enormous. In 2001, it was estimated that the software industry lost \$10.97 billion due to software piracy (BSA, 2002). Software developers pass this loss on to the users of original software. Software piracy has been investigated from various disciplinary perspectives, including the legal perspective, (Swinyard, Rinne, Kau, 1990; Im & Van Epps, 1992; Robinson & Reithel, 1994), the decision-making perspective (Taylor and Shim, 1993; Simpson, Banerjee, & Simpson Jr, 1994; Sims, Cheng, & Teegen, 1996; Banerjee, Cronan & Jones, 1998; Thong & Yap , 1998; Wager & Sanders, 2001) and the moral perspective (Lee, Eining & Long, 1994; Logsdon, Thompson, Reid, 1994; Kini, Rominger & Vijayaraman, 2000). While these studies offer some insights, many of the results are contradictory. In addition, most of the studies were conducted in Western countries, particularly the United States. Given the immature state of theory, and the obvious cultural differences between Western countries and Hong Kong, it was considered advisable to begin “with a blank sheet of

paper”.

The study, therefore, began with a content analysis of messages collected from an Internet based users’ discussion forum in Hong Kong, and from an online survey. Using the grounded theory approach, I identified five main factors as predictors of the reported leniency toward software piracy.

In the second phase, I developed and administered a survey to 263 Hong Kong computer end-users participating in a computer exhibition. Findings suggest that respondents’ knowledge of software copyright law and availability of original software have direct effects on self-reported leniency towards software piracy. Social acceptance towards software piracy, the cost of original software, and respondent gender were also found to affect self-reported acts of software piracy. Theoretical implications, as well as practical implications for preventing software piracy, are discussed.

## Table of Contents

Abstract	i
Certificate of Approval by the Panel of Examiners	iii
Acknowledgements	iv
Table of Contents	vi
List of Tables	viii
List of Figures	x
Chapter One: Introduction	1
The Problem of Software Piracy	1
Objectives of the Study	5
Justification of the Study	6
Limitations of the Study	7
Process of the Study	8
Outline of the Study	10
Chapter Two: Previous Empirical Studies on Software Piracy	12
Introduction	12
Legal Perspective	12
Moral and Ethical Perspectives	15
Situational Perspective	20
Summary of Previous Studies	23
Chapter Three: Qualitative Data	35
Introduction	35
Grounded Theory Approach	36
Internet Online Survey	36
A Content Analysis of “hk.comp.hacker”	38
Major Findings and Interpretations	45
Social Acceptance of Software Piracy	45
The Cost of Original Software	48
Urgency of Need for Computer Software	54
The Availability of Original Software	58
Knowledge of Computer Software Copyright Law	62
Formulating a Grounded Theory for Software Piracy	64
Concluding Remarks	68
Chapter Four: Development and Pilot Testing of Survey Instrument	69
Introduction	69
The Survey Instrument	70
Pilot Test	74

Chapter Summary	79
Chapter Five: The Research Sample, Construct Reliabilities, and Bivariate Correlations	80
Introduction	80
Profile of Research Sample	80
Reliability of the Constructs	87
Factor Analysis of Independent Variables	89
Descriptive Statistics	91
Correlation Analysis	93
Chapter Summary	98
Chapter Six: Multivariate Regression Results and Major Findings	99
Introduction	99
Regression Results	102
Interaction Tests	105
Gender Effect on the Reported Leniency towards Software Piracy	125
Chapter Summary	127
Chapter Seven: Implications, Suggestions and Future Research	128
Introduction	128
Discussion of Results	128
Contributions of the Study	133
Limitations	137
Future Research Directions	138
Concluding Remarks	139
Chapter Eight: References	141
Appendix A: Online Survey Screens	160
Appendix B: Sample of Invitation Letter and Experts Recruited	169
Appendix C: Pencil-and-paper Instruments	172

## LIST OF TABLES

<u>Number</u>	<u>Title</u>	<u>Page</u>
1	2001 BSA/SPA Piracy Study Results (Selected Countries in the Asia-Pacific Region)	4
2	Brief Summary of Past Empirical Studies on Software Piracy (1990-2003)	25
