Abstract

This study investigated the family-related origins of reactive and proactive aggression in adolescents. No study thus far has examined 1) whether parenting and attachment have a joint effect on reactive and proactive aggression; 2) how marital relationships may be related to these aggression subtypes; 3) how different family subsystems, such as the parent-child and marital subsystems, affect one another in their relationships with adolescents' reactive and proactive aggression; 4) whether family variables relate equally to reactive and proactive aggression; and 5) whether the relationships between these family variables and aggression subtypes vary between boys and girls. This study used a joint residual regression method to address these research gaps and examine how family variables, including parenting styles, attachment, inter-parental conflict and appraisals to inter-parental conflict such as self-blame and perceived threat, influence reactive and proactive aggression in adolescence. Participants were 1,865 adolescents (aged 10-16 years) and their fathers and mothers recruited from three junior middle schools in Guangzhou, China. Adolescents reported their own reactive and proactive aggression, inter-parental conflict, their appraisals to parental conflict (e.g., self-blame and perceived threat), perceived parenting styles, and attachment with fathers and mothers. Fathers and mothers reported reactive and proactive aggression of adolescents and the parenting styles of themselves and their spouses.

Existing findings suggested that parenting styles and attachment may influence children's outcomes independently, and that parenting styles are moderated or mediated by attachment. These three possible models were examined in terms of their relationships with reactive and proactive aggression after taking inter-parental conflict and appraisals

into account. Support was found for the independent predictor and moderation models, and the results varied on genders of the adolescent, parenting styles and aggression subtypes. Further, attachment was found to have a moderation effect on the relationships between authoritarian parenting style and reactive aggression in girls, between authoritative parenting style and reactive aggression in boys, and between permissive parenting style and proactive aggression in boys. Secure attachment's buffering effect on reactive aggression was only evident when authoritarian parenting was low for girls and when authoritative parenting style was high for boys. Insecure attachment was only positively related to boys' proactive aggression when permissive parenting style was high rather than low. In the independent models, authoritarian and permissive parenting styles were positively related to both reactive and proactive aggression. Authoritative parenting style was not significantly related to either reactive or proactive aggression after other family variables were considered. Attachment was mainly negatively related to self-reported reactive aggression but not proactive aggression, except in models with permissive parenting styles.

Based on the relationships between attachment and parenting styles, a mediation model of inter-parental conflict through parenting styles, attachment and appraisals such as self-blame and perceived threat was developed separately for girls and boys. Parenting styles, attachment and appraisals completely mediated the positive effects of inter-parental conflict on reactive and proactive aggression. Moreover, self-blame had only a positive effect and mediated the effect of inter-parental conflict on self-reported reactive and proactive aggression in girls but not in boys. Perceived threat had a positive effect and mediated the effect of inter-parental conflict on reactive but not proactive aggression.

In addition, the family variables tended to relate more strongly to reactive than proactive aggression, especially when adolescents reported the aggression subtypes.

These results suggest that the patterns of how family variables mutually influence their effects on aggressive behaviors in adolescents vary according to the aggression subtypes and gender of the adolescent. Only when both marital and parent-child relationships are considered can the family-related influences on reactive and proactive aggression in adolescents be fully captured.

Table of Contents

Abstract	i
Acknowledgement	iv
List of Tables.....	xiii
List of Figures	xvii
Chapter 1 Introduction	1
Chapter 2 Literature Review.....	6
2.1 Reactive and Proactive Aggression.....	6
2.1.1 Definition of Reactive and Proactive Aggression.....	6
2.1.2 Theories of Reactive and Proactive Aggression	6
2.1.3 Reactive and Proactive Aggression in Adolescence	9
2.1.4 Distinction between Reactive and Proactive Aggression.....	10
2.1.5 Gender Differences in Reactive and Proactive Aggression	12
2.1.6 Family Origins of Reactive and Proactive Aggression	13
2.2 Parenting Styles	15
2.2.1 Definition of the Different Types of Parenting Styles	15
2.2.2 Authoritarian Parenting Style and Aggression.....	17
2.2.3 Authoritative Parenting Style and Aggression.....	21
2.2.4 Permissive Parenting Style and Aggression.....	23
2.2.5 Gender Differences in Parenting Styles	25
2.3 Parent-Child Attachment.....	27
2.3.1 Definition of Attachment	27

2.3.2 Attachment and Aggression	29
2.3.3 Gender Difference in Attachment	31
2.4 Parenting Styles and Attachment	32
2.5 Inter-Parental Conflict.....	36
2.5.1 Inter-Parental Conflict and Modeling	37
2.5.2 Inter-Parental Conflict and Appraisals	38
2.5.3 Inter-Parental Conflict and Attachment	41
2.5.4 Inter-Parental Conflict and Parenting Styles.....	42
2.5.5 Gender Differences in Inter-Parental Conflict, Self-Blame, and Perceived Threat	46
2.6 Research Gap	48
Chapter 3 Conceptual Framework	51
3.1 Summary of Distinction between Reactive and Proactive Aggression and Their Correlates	52
3.2 Summary of the Possible Linkage between Family Variables and Reactive and Proactive Aggression.....	52
3.3 Summary of the Effect of Inter-Parental Conflict Reactive and Proactive Aggression through Appraisals, Parenting Styles, and Attachment.....	55
3.4 Summary of the Inter-Relationships between Attachment and Parenting Styles	57
3.5 Summary of Gender Differences in the Relationship between Family-Related Variables and Aggression Subtypes	60
3.6 Theoretical Model.....	60

3.7 Hypotheses	63
Chapter 4 Methodology	66
4.1 Participants.....	66
4.2 Procedure	67
4.3 Measurement.....	68
4.3.1 Reactive and Proactive Aggression.....	68
4.3.2 Parenting Styles	69
4.3.3 Attachment.....	71
4.3.4 Inter-Parental Conflict.....	72
4.3.5 Appraisals of Inter-Parental Conflict	73
4.4 Analysis Strategies	75
Chapter 5 Results	78
5.1 Primary Analysis.....	78
5.2 Measurement Model	81
5.2.1 Self-Reported Reactive and Proactive Aggression	81
5.2.2 Parent-Reported Reactive and Proactive Aggression	83
5.2.3 Parenting Styles	84
5.2.4 Attachment.....	89
5.2.5 Inter-Parental Conflict and Appraisals.....	89
5.3 Structural Models	89
5.3.1 Attachment and Reactive and Proactive Aggression	90
5.3.2 Authoritarian Parenting Styles and Reactive and Proactive Aggression	94

5.3.3 Authoritative Parenting Style and Reactive and Proactive Aggression	96
5.3.4 Permissive Parenting Style and Reactive and Proactive Aggression.....	98
5.3.5 Inter-Parental Conflict and Reactive and Proactive Aggression.....	99
5.3.6 Self-Blame and Reactive and Proactive Aggression.....	101
5.3.7 Perceived Threat and Reactive and Proactive Aggression.....	102
5.3.8 Mediation Model of Inter-Parental Conflict on Reactive and Proactive Aggression through Self-Blame and Perceived Treat	103
5.3.9 Role of Attachment in Parenting Styles' Effects on Reactive and Proactive Aggression: Independent Predictor, Mediator or Moderator?	107
5.3.10 Inter-Parental Conflict, Self-Blame, Perceived Threat, Parenting Styles, Attachment and Reactive and Proactive Aggression	125
5.3.11 Summary of Results	150
Chapter 6 Discussion	158
6.1 Measurement Differences in Reactive Aggression between Self-Reported and Parent-Reported Scales	158
6.2 Parenting Styles and Reactive and Proactive Aggression.....	161
6.2.1 Authoritarian Parenting and Reactive and Proactive Aggression	161
6.2.2 Authoritative Parenting Style and Reactive and Proactive Aggression	166
6.2.3 Permissive Parenting Style and Reactive and Proactive Aggression.....	170
6.3 Attachment and Reactive and Proactive Aggression	173
6.3.1 The Effect of Attachment on Reactive Aggression.....	173
6.3.2 The Effect of Attachment on Proactive Aggression.....	175

6.3.3 Gender Difference in the Effect of Attachment on Reactive and Proactive Aggression	178
6.4 Relationship between Attachment and Parenting Styles in Their Joint Effect on Reactive and Proactive Aggression.....	179
6.4.1 Gender Difference in the Joint Effect of Attachment and Authoritarian Parenting on Reactive Aggression	181
6.4.2 Gender Difference in the Joint Effect of Attachment and Authoritative Parenting on Reactive Aggression	183
6.4.3 Gender Difference in the Joint Effect of Attachment and Permissive Parenting on Proactive Aggression.....	185
6.5 Inter-Parental Conflict and Reactive and Proactive Aggression.....	188
6.5.1 The Effect of Inter-Parental Conflict on Reactive Aggression	188
6.5.2 The Effect of Inter-Parental Conflict on Proactive Aggression	189
6.5.3 Gender Difference in the Effect of Inter-Parental Conflict on Reactive and Proactive Aggression.....	190
6.6 Self-Blame and Reactive and Proactive Aggression.....	190
6.6.1 The Effect of Self-Blame on Reactive Aggression	190
6.6.2 The Effect of Self-Blame on Proactive Aggression	191
6.6.3 Gender Difference in the Effect of Self-Blame on Reactive and Proactive Aggression	192
